Technology Park Brno

unique location of innovation

total area of 60 000 m²

Technology Park Brno is a campus-style business park, offering rentals of modern category-A offices, as well as mixed-purpose spaces for research and light industry. The park is situated right next to Brno University of Technology's (VUT) main campus. To date, more than 60,000 square meters of administrative and manufacturing space has been built to facilitate high-tech industries, strategic services and research and development. Approximately 40 companies have premises here, totalling more than 7,000 employees.

Technology Park Brno is one of the most important projects of its kind in the region. Thanks to its close proximity to VUT and the CEITEC and AdMaS research centres, it provides its client companies with unique benefits, such as a talented pool of technology graduates, as well as the opportunity to collaborate with the university and the nearby research and development centres.
